

Acrylic Picture Frame | Measuring Guide

A step-by-step guide to measuring your acrylic frame

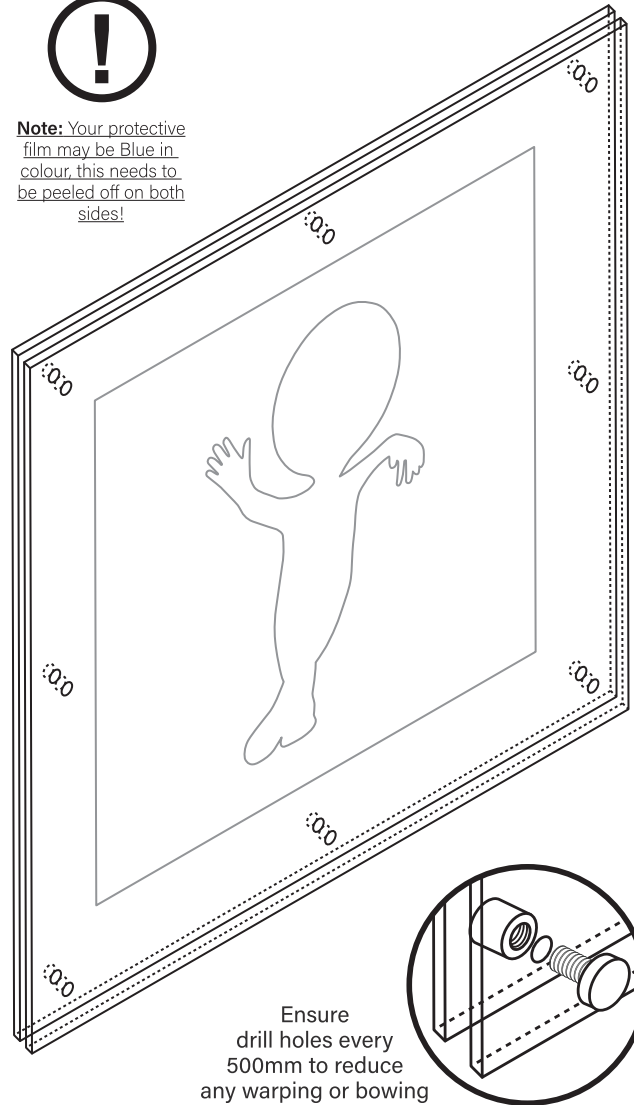

SCAN ME

Measure your artwork (eg. 900 x 900mm) and add 50mm on all sides for drill holes

Note: Your protective film may be Blue in colour, this needs to be peeled off on both sides!

Ensure drill holes every 500mm to reduce any warping or bowing

NB: The wall fixing screws (**are not**) included in your kit as there are lots of different interior wall types. You'll need to buy something that will suit your wall type (Plaster, Solid, Brick) and also that will fit inside your stand-offs. Take your stand-offs with you and visit your local DIY store to find something suitable.

How To Measure Your Bespoke Acrylic Frame

How To Plan Your Border

If you would prefer to order acrylic frames which are larger than your print size and allow a clear border around the print then please enter the size of your image plus the size of your desired border.

For the fixings to be in the centre of the free space around your artwork add a 50mm border all the way round i.e. 100mm to each dimension. The minimum border to prevent the fixings overlapping the artwork would be 35mm i.e. 70mm to each dimension.

We drill holes 25mm from the edge unless you specify otherwise. There is room in our checkout to add notes about a preference if you have one. We suggest a fixing every 500mm. Our fixings will hold the 2 acrylic panels together and effectively 'trap' your artwork in place.
